

Sprint Report 1  
Rent's Planet  
Oct 20, 2016

Stop...

- Being disorganized. It took almost the whole first sprint to actually organize our ideas, time management, and work distribution. Though organization improved drastically from where the group started, there is still more a lot of room to grow in this area

Start...

- Communicating better. Communication will be key and we've already had a couple communication mishaps. This is one of the easier things to fix because it is as simple as responding in the group message and talking to each other during planning/coding sessions
- Tracking our progress better. We utilize the scrum board effectively but we are not always at the scrum board and we need to communicate our progress better so we all know where we are in the tasks
- Documenting as we go. Documentation wasn't that good for this sprint

Keep...

- Meeting up for coding sessions. The best and most productive time we've worked on this project we were all together in the same room

Work Completed

- Set up server and html to it
- Set up directory structure for project
- Set up database and create java interface to interact with it
- Set up servlet so the webpage can communicate with database
- Implement JS routines to grab input data and send to server/database

Work not Completed:

- Write routines to get information from database to front end website
  - As a prospective tenant I want to be able to see others' reviews so that I know more about house rentals

Work Completion rate:

- Total number of person hours dedicated to project ~25 to 30
- User stories completed: 1
  - As a renter, I want to be able to post rental reviews to the website so I can share my information and experiences with prospective tenants

## Final Burnup
