Release Plan v1
Last modified 11-23-2016
Renter Paradise by Animal House

High Level Goals:
-   Implement a website that interacts with a database to display data to the user.
-   Users can search for and write reviews by address and see house location on a map
-   Have a pretty website.
-   Make a stable website and server

(story points) "As a {user role}, I want {goal} [so that{reason}]"
User Stories for Release:
Sprint 1:

(21) As a renter, I want a user interface, so I can use the website
(13) As a programmer, I want a database to store housing and user information

Sprint 2:

(21) As a renter, I want to have information about houses (high priority)
(21) As an ex-renter, I want to post reviews of house conditions and landlords.

Sprint 3:

(8) As a product owner, I want a polished website so it is more marketable.
(8) As a user, I want to have an intuitive UI, so I like using the website more.
(13) As a renter, I want to be able to search for houses so I can find reviews
(5) As a renter, I want house reviews, so I can be more informed of a place
(5) As a renter, I want to interact with a map, so I can have a better way of finding houses

Product Backlog: (things not yet in release)

As a renter, I want to see an average neighborhood rating from multiple addresses to more accurately gauge the neighborhood.

As a renter, I want to have information of nearby houses if my searched house has no review
As a possible tenant, I want to circle an area on a map and get a list of all rentals in that area.
As a renter, I want a better looking website, so can be happier
As a renter, I want average ratings, so to have a better gauge of the actual rating of a place
As a renter, I want landlord reviews, so I can be more informed of one or more places

Initial Project Presentation
